

Dynamic range calculation

For range prediction that is always up to date and accurate

Dynamic prediction

of the electric vehicle's range with the help of a broad set of real-time data relating to the vehicle, surroundings, and driving style

- Exact range prediction through continuous analysis of data relating to the vehicle and surroundings
- Faster charging thanks to thermal preconditioning of the vehicle battery
- Continuous range monitoring and charging recommendations for the driver

Optimized range

through driving recommendations for the driver and adapted vehicle settings
